Projection from 2D to 1D

(a) Projection of $x \in \mathbb{R}^2$ onto a subspace U with basis vector \boldsymbol{b} .

(b) Projection of a two-dimensional vector \boldsymbol{x} with $\|\boldsymbol{x}\|=1$ onto a one-dimensional subspace spanned by \boldsymbol{b} .

Projection

Projection

Let V be a vector space and $U \subseteq V$ be a subspace of V. A linear mapping $\pi: V \mapsto U$ is called a projection if $\pi^2 = \pi \circ \pi = \pi$.

Projection

Projection

Let V be a vector space and $U \subseteq V$ be a subspace of V. A linear mapping $\pi: V \mapsto U$ is called a projection if $\pi^2 = \pi \circ \pi = \pi$.

 Recall that linear mappings can be expressed by transformation matrices.

Projection

Projection

Let V be a vector space and $U \subseteq V$ be a subspace of V. A linear mapping $\pi: V \mapsto U$ is called a projection if $\pi^2 = \pi \circ \pi = \pi$.

- Recall that linear mappings can be expressed by transformation matrices.
- The projection matrices ${m P}_{\pi}$ exhibit the property that ${m P}_{\pi}^2 = {m P}_{\pi}$.

- $\pi_U(\mathbf{x})$: closest to \mathbf{x} .
 - $\|\mathbf{x} \pi_U(\mathbf{x})\|$ is minimal.

- $\pi_U(\mathbf{x})$: closest to \mathbf{x} .
 - $\|\mathbf{x} \pi_U(\mathbf{x})\|$ is minimal.
 - $\bullet \ \langle \pi_U(\mathbf{x}) \mathbf{x}, \mathbf{b} \rangle = 0.$
- Projection $\pi_U(\mathbf{x})$ of \mathbf{x} onto U must be an element in U.
 - $\pi_U(\mathbf{x}) = \lambda \mathbf{b}$ for some $\lambda \in \mathbb{R}$.

- $\pi_U(\mathbf{x})$: closest to \mathbf{x} .
 - $\|\mathbf{x} \pi_U(\mathbf{x})\|$ is minimal.
 - $\bullet \ \langle \pi_U(\mathbf{x}) \mathbf{x}, \mathbf{b} \rangle = 0.$
- Projection $\pi_U(\mathbf{x})$ of \mathbf{x} onto U must be an element in U.
 - $\pi_U(\mathbf{x}) = \lambda \mathbf{b}$ for some $\lambda \in \mathbb{R}$.
- Determining the coordinates:

- $\pi_U(\mathbf{x})$: closest to \mathbf{x} .
 - $\|\mathbf{x} \pi_U(\mathbf{x})\|$ is minimal.
 - $\bullet \ \langle \pi_U(\mathbf{x}) \mathbf{x}, \mathbf{b} \rangle = 0.$
- Projection $\pi_U(\mathbf{x})$ of \mathbf{x} onto U must be an element in U.
 - $\pi_U(\mathbf{x}) = \lambda \mathbf{b}$ for some $\lambda \in \mathbb{R}$.
- Determining the coordinates:

Since
$$\pi_U(\mathbf{b}) = \lambda \mathbf{b}$$
:

$$\langle \mathbf{x} - \pi_U(\mathbf{x}), \mathbf{b} \rangle = 0 \iff \langle \mathbf{x} - \lambda \mathbf{b}, \mathbf{b} \rangle = 0.$$

- $\pi_U(\mathbf{x})$: closest to \mathbf{x} .
 - $\|\mathbf{x} \pi_U(\mathbf{x})\|$ is minimal.
 - $\langle \pi_U(\mathbf{x}) \mathbf{x}, \mathbf{b} \rangle = 0.$
- Projection $\pi_U(\mathbf{x})$ of \mathbf{x} onto U must be an element in U.
 - $\pi_U(\mathbf{x}) = \lambda \mathbf{b}$ for some $\lambda \in \mathbb{R}$.
- Determining the coordinates:

Since
$$\pi_U(\mathbf{b}) = \lambda \mathbf{b}$$
:

$$\langle \mathbf{x} - \pi_U(\mathbf{x}), \mathbf{b} \rangle = 0 \Leftrightarrow \langle \mathbf{x} - \lambda \mathbf{b}, \mathbf{b} \rangle = 0.$$

$$\Leftrightarrow \ \langle \mathbf{x}, \mathbf{b} \rangle - \lambda \langle \mathbf{b}, \mathbf{b} \rangle = 0 \ \Leftrightarrow \ \lambda = \frac{\langle \mathbf{x}, \mathbf{b} \rangle}{\langle \mathbf{b}, \mathbf{b} \rangle} = \frac{\langle \mathbf{b}, \mathbf{x} \rangle}{\|\mathbf{b}\|^2}$$

- $\pi_U(\mathbf{x})$: closest to \mathbf{x} .
 - $\|\mathbf{x} \pi_U(\mathbf{x})\|$ is minimal.
 - $\bullet \ \langle \pi_U(\mathbf{x}) \mathbf{x}, \mathbf{b} \rangle = 0.$
- Projection $\pi_U(\mathbf{x})$ of \mathbf{x} onto U must be an element in U.
 - $\pi_U(\mathbf{x}) = \lambda \mathbf{b}$ for some $\lambda \in \mathbb{R}$.
- Determining the coordinates:

Since
$$\pi_U(\mathbf{b}) = \lambda \mathbf{b}$$
:

$$\langle \mathbf{x} - \pi_U(\mathbf{x}), \mathbf{b} \rangle = 0 \Leftrightarrow \langle \mathbf{x} - \lambda \mathbf{b}, \mathbf{b} \rangle = 0.$$

$$\Leftrightarrow \ \langle \mathbf{x}, \mathbf{b} \rangle - \lambda \langle \mathbf{b}, \mathbf{b} \rangle = 0 \ \Leftrightarrow \ \lambda = \frac{\langle \mathbf{x}, \mathbf{b} \rangle}{\langle \mathbf{b}, \mathbf{b} \rangle} = \frac{\mathbf{b}^{\top} \mathbf{x}}{\|\mathbf{b}\|^2} = \frac{\mathbf{b}^{\top} \mathbf{x}}{\mathbf{b}^{\top} \mathbf{b}}.$$

• Finding the projection $\pi_U(\mathbf{x}) \in U$:

$$\pi_U(\mathbf{x}) = \lambda \mathbf{b} = \frac{\langle \mathbf{x}, \mathbf{b} \rangle}{\|\mathbf{b}\|^2} \mathbf{b} = \frac{\mathbf{b}^\top \mathbf{x}}{\|\mathbf{b}\|^2} \mathbf{b}.$$

• Finding the projection $\pi_U(\mathbf{x}) \in U$:

$$\pi_U(\mathbf{x}) = \lambda \mathbf{b} = \frac{\langle \mathbf{x}, \mathbf{b} \rangle}{\|\mathbf{b}\|^2} \mathbf{b} = \frac{\mathbf{b}^{\top} \mathbf{x}}{\|\mathbf{b}\|^2} \mathbf{b}.$$

Note that
$$\|\pi_U(\mathbf{x})\| = \|\lambda \mathbf{b}\| = |\lambda| \|\mathbf{b}\|.$$

• Finding the projection $\pi_U(\mathbf{x}) \in U$:

$$\pi_U(\mathbf{x}) = \lambda \mathbf{b} = \frac{\langle \mathbf{x}, \mathbf{b} \rangle}{\|\mathbf{b}\|^2} \mathbf{b} = \frac{\mathbf{b}^{\top} \mathbf{x}}{\|\mathbf{b}\|^2} \mathbf{b}.$$

Note that $\|\pi_U(\mathbf{x})\| = \|\lambda \mathbf{b}\| = |\lambda| \|\mathbf{b}\|$.

• If we use the dot product as the inner product and let θ be the angle between \mathbf{x} and \mathbf{b} :

$$\|\pi_U(\mathbf{x})\| = \frac{|\mathbf{b}^{\top}\mathbf{x}|}{\|\mathbf{b}\|^2} \|\mathbf{b}\| = |\cos\theta| \|\mathbf{x}\| \|\mathbf{b}\| \frac{\|\mathbf{b}\|}{\|\mathbf{b}\|^2} = |\cos\theta| \|\mathbf{x}\|.$$

- Finding the projection matrix P_{π} :
 - Recall: projection is a linear mapping.
 - With the dot product as the inner product,

$$\|\pi_U(\mathbf{x})\| = \lambda \mathbf{b} = \mathbf{b}\lambda = \mathbf{b} \frac{\mathbf{b}^{\top} \mathbf{x}}{\|\mathbf{b}\|^2} = \frac{\mathbf{b}\mathbf{b}^{\top}}{\|\mathbf{b}\|^2} \mathbf{x}.$$

So,

$$oldsymbol{P}_{\pi} = rac{\mathbf{b}\mathbf{b}^{ op}}{\|\mathbf{b}\|^2}.$$

Note: bb^{\top} is a symmetric matrix.

- Finding the projection matrix P_{π} :
 - Recall: projection is a linear mapping.
 - With the dot product as the inner product,

$$\|\pi_U(\mathbf{x})\| = \lambda \mathbf{b} = \mathbf{b}\lambda = \mathbf{b} \frac{\mathbf{b}^{\top} \mathbf{x}}{\|\mathbf{b}\|^2} = \frac{\mathbf{b}\mathbf{b}^{\top}}{\|\mathbf{b}\|^2} \mathbf{x}.$$

So,

$$oldsymbol{P}_{\pi} = rac{\mathbf{b}\mathbf{b}^{ op}}{\|\mathbf{b}\|^2}.$$

Note: bb^{\top} is a symmetric matrix.

ML Math - Linear Algebra Orthogonal Projections

Example

Find the projection matrix P_{π} onto the line U through the origin spanned by $\mathbf{b} = \begin{bmatrix} 1 & 2 & 2 \end{bmatrix}^{\top}$ and the projection of $\mathbf{x} = \begin{bmatrix} 1 & 1 & 1 \end{bmatrix}^{\top}$.

Find the projection matrix P_{π} onto the line U through the origin spanned by $\mathbf{b} = \begin{bmatrix} 1 & 2 & 2 \end{bmatrix}^{\top}$ and the projection of $\mathbf{x} = \begin{bmatrix} 1 & 1 & 1 \end{bmatrix}^{\top}$.

$$oldsymbol{P}_{\pi} = rac{\mathbf{b} \mathbf{b}^{ op}}{\mathbf{b}^{ op} \mathbf{b}}$$

Find the projection matrix P_{π} onto the line U through the origin spanned by $\mathbf{b} = \begin{bmatrix} 1 & 2 & 2 \end{bmatrix}^{\top}$ and the projection of $\mathbf{x} = \begin{bmatrix} 1 & 1 & 1 \end{bmatrix}^{\top}$.

$$oldsymbol{P}_{\pi} = rac{\mathbf{b}\mathbf{b}^{ op}}{\mathbf{b}^{ op}\mathbf{b}} = rac{1}{9} \left[egin{array}{c} 1 \\ 2 \\ 2 \end{array}
ight] \left[egin{array}{c} 1 & 2 & 2 \end{array}
ight]$$

Find the projection matrix \mathbf{P}_{π} onto the line U through the origin spanned by $\mathbf{b} = \begin{bmatrix} 1 & 2 & 2 \end{bmatrix}^{\top}$ and the projection of $\mathbf{x} = \begin{bmatrix} 1 & 1 & 1 \end{bmatrix}^{\top}$.

$$\mathbf{P}_{\pi} = \frac{\mathbf{b}\mathbf{b}^{\top}}{\mathbf{b}^{\top}\mathbf{b}} = \frac{1}{9} \begin{bmatrix} 1\\2\\2 \end{bmatrix} [1 \ 2 \ 2] = \frac{1}{9} \begin{bmatrix} 1 \ 2 \ 2\\2 \ 4 \ 4\\2 \ 4 \ 4 \end{bmatrix}.$$

$$\pi_U(\mathbf{x}) = \mathbf{P}_{\pi}\mathbf{x} = \frac{1}{9} \begin{bmatrix} 1 & 2 & 2 \\ 2 & 4 & 4 \\ 2 & 4 & 4 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix} = \frac{1}{9} \begin{bmatrix} 5 \\ 10 \\ 10 \end{bmatrix}$$

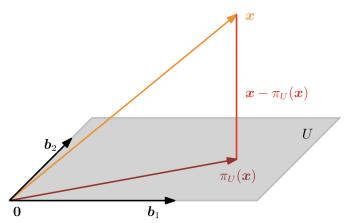

Find the projection matrix \mathbf{P}_{π} onto the line U through the origin spanned by $\mathbf{b} = \begin{bmatrix} 1 & 2 & 2 \end{bmatrix}^{\top}$ and the projection of $\mathbf{x} = \begin{bmatrix} 1 & 1 & 1 \end{bmatrix}^{\top}$.

$$\mathbf{P}_{\pi} = rac{\mathbf{b}\mathbf{b}^{\top}}{\mathbf{b}^{\top}\mathbf{b}} = rac{1}{9} \left[egin{array}{ccc} 1 \\ 2 \\ 2 \end{array}
ight] \left[egin{array}{cccc} 1 & 2 & 2 \end{array} \right] = rac{1}{9} \left[egin{array}{cccc} 1 & 2 & 2 \\ 2 & 4 & 4 \\ 2 & 4 & 4 \end{array}
ight].$$

$$\pi_U(\mathbf{x}) = \mathbf{P}_{\pi}\mathbf{x} = \frac{1}{9} \begin{bmatrix} 1 & 2 & 2 \\ 2 & 4 & 4 \\ 2 & 4 & 4 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix} = \frac{1}{9} \begin{bmatrix} 5 \\ 10 \\ 10 \end{bmatrix} \in \operatorname{span} \left(\begin{bmatrix} 1 \\ 2 \\ 2 \end{bmatrix} \right).$$

Projection onto General Subspaces (1/4)

Orthogonal projections of $\mathbf{x} \in \mathbb{R}^n$ onto $U \subseteq \mathbb{R}^n$ with $\dim(U) = m \ge 1$.

Projection onto General Subspaces (2/4)

• Any projection can be represented as a linear combination of the basis vectors $\mathbf{b}_1, \dots, \mathbf{b}_m$ of U.

•
$$\pi_U(\mathbf{x}) = \sum_{i=1}^m \lambda_i \mathbf{b}_i$$
.

• Find the coordinates $\lambda_1, \ldots, \lambda_m$:

$$\pi_U(\mathbf{x}) = \sum_{i=1}^m \lambda_i \mathbf{b}_i = \mathbf{B} \boldsymbol{\lambda}$$

for $\boldsymbol{B} = [\mathbf{b}_1, \dots, \mathbf{b}_m] \in \mathbb{R}^{n \times m}$, $\boldsymbol{\lambda} = [\lambda_1, \dots, \lambda_m]^{\top} \in \mathbb{R}^m$.

• Any projection can be represented as a linear combination of the basis vectors $\mathbf{b}_1, \dots, \mathbf{b}_m$ of U.

•
$$\pi_U(\mathbf{x}) = \sum_{i=1}^m \lambda_i \mathbf{b}_i$$
.

• Find the coordinates $\lambda_1, \ldots, \lambda_m$:

$$\pi_U(\mathbf{x}) = \sum_{i=1}^m \lambda_i \mathbf{b}_i = \mathbf{B} \boldsymbol{\lambda}$$
 (closest to \mathbf{x} on U)

for
$$\boldsymbol{B} = [\mathbf{b}_1, \dots, \mathbf{b}_m] \in \mathbb{R}^{n \times m}$$
, $\boldsymbol{\lambda} = [\lambda_1, \dots, \lambda_m]^{\top} \in \mathbb{R}^m$.

Note: $\mathbf{x} \perp \{\mathbf{b}_1, \dots, \mathbf{b}_m\}$ (: minimum distance)

$$\langle \mathbf{b}_1, \mathbf{x} - \pi_U(\mathbf{x}) \rangle = \mathbf{b}_1^{\top}(\mathbf{x} - \pi_U(\mathbf{x})) = 0$$

:

$$\langle \mathbf{b}_m, \mathbf{x} - \pi_U(\mathbf{x}) \rangle = \mathbf{b}_m^\top (\mathbf{x} - \pi_U(\mathbf{x})) = 0$$

• Any projection can be represented as a linear combination of the basis vectors $\mathbf{b}_1, \dots, \mathbf{b}_m$ of U.

•
$$\pi_U(\mathbf{x}) = \sum_{i=1}^m \lambda_i \mathbf{b}_i$$
.

• Find the coordinates $\lambda_1, \ldots, \lambda_m$:

$$\pi_U(\mathbf{x}) = \sum_{i=1}^m \lambda_i \mathbf{b}_i = \mathbf{B} \lambda$$
 (closest to \mathbf{x} on U)

for
$$\mathbf{\textit{B}} = [\mathbf{b}_1, \dots, \mathbf{b}_m] \in \mathbb{R}^{n \times m}$$
, $\mathbf{\lambda} = [\lambda_1, \dots, \lambda_m]^{\top} \in \mathbb{R}^m$.

Note: $(\mathbf{x} - \pi_U(\mathbf{x})) \perp \{\mathbf{b}_1, \dots, \mathbf{b}_m\}$ (: minimum distance)

$$\mathbf{b}_{1}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

$$\vdots$$

$$\mathbf{b}_{m}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

Since

$$\mathbf{b}_{1}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

$$\vdots$$

$$\mathbf{b}_{m}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

We have

$$\begin{bmatrix} \mathbf{b}_1^\top \\ \vdots \\ \mathbf{b}_m^\top \end{bmatrix} [\mathbf{x} - \boldsymbol{B}\boldsymbol{\lambda}] = \mathbf{0} \quad \Leftrightarrow \quad \boldsymbol{B}^\top (\mathbf{x} - \boldsymbol{B}\boldsymbol{\lambda}) = \mathbf{0}$$
$$\Leftrightarrow \quad \boldsymbol{B}^\top \boldsymbol{B}\boldsymbol{\lambda} = \boldsymbol{B}^\top \mathbf{x}$$

Note: $B^{T}B$ is invertible

Since

$$\mathbf{b}_{1}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

$$\vdots$$

$$\mathbf{b}_{m}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

We have

$$\left[egin{array}{c} \mathbf{b}_1^{ op} \ dots \ \mathbf{b}_m^{ op} \end{array}
ight] [\mathbf{x} - oldsymbol{B} oldsymbol{\lambda}] = \mathbf{0} \hspace{0.2cm}\Leftrightarrow\hspace{0.2cm} oldsymbol{B}^{ op} (\mathbf{x} - oldsymbol{B} oldsymbol{\lambda}) = \mathbf{0} \ \Leftrightarrow\hspace{0.2cm} oldsymbol{B}^{ op} oldsymbol{B} oldsymbol{\lambda} = oldsymbol{B}^{ op} \mathbf{x} \end{array}$$

Note: $B^{\top}B$ is invertible $\Rightarrow \lambda = (B^{\top}B)^{-1}B^{\top}x$.

Since

$$\mathbf{b}_{1}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

$$\vdots$$

$$\mathbf{b}_{m}^{\top}(\mathbf{x} - \mathbf{B}\lambda) = 0$$

We have

$$\begin{bmatrix} \mathbf{b}_1^\top \\ \vdots \\ \mathbf{b}_m^\top \end{bmatrix} [\mathbf{x} - \boldsymbol{B}\boldsymbol{\lambda}] = \mathbf{0} \quad \Leftrightarrow \quad \boldsymbol{B}^\top (\mathbf{x} - \boldsymbol{B}\boldsymbol{\lambda}) = \mathbf{0}$$
$$\Leftrightarrow \quad \boldsymbol{B}^\top \boldsymbol{B}\boldsymbol{\lambda} = \boldsymbol{B}^\top \mathbf{x}$$

Note: $\mathbf{B}^{\top}\mathbf{B}$ is invertible $\Rightarrow \lambda = (\mathbf{B}^{\top}\mathbf{B})^{-1}\mathbf{B}^{\top}\mathbf{x}$.

$$\bullet \ \pi_U(\mathbf{x}) = \mathbf{B}(\mathbf{B}^{\top}\mathbf{B})^{-1}\mathbf{B}^{\top}\mathbf{x}$$

Since

$$egin{aligned} \mathbf{b}_1^{ op}(\mathbf{x}-oldsymbol{B}oldsymbol{\lambda}) &= 0 \ &\vdots \ & \mathbf{b}_m^{ op}(\mathbf{x}-oldsymbol{B}oldsymbol{\lambda}) &= 0 \end{aligned}$$

We have

$$\begin{bmatrix} \mathbf{b}_1^\top \\ \vdots \\ \mathbf{b}_m^\top \end{bmatrix} [\mathbf{x} - \boldsymbol{B}\boldsymbol{\lambda}] = \mathbf{0} \quad \Leftrightarrow \quad \boldsymbol{B}^\top (\mathbf{x} - \boldsymbol{B}\boldsymbol{\lambda}) = \mathbf{0}$$
$$\Leftrightarrow \quad \boldsymbol{B}^\top \boldsymbol{B}\boldsymbol{\lambda} = \boldsymbol{B}^\top \mathbf{x}$$

Note: $B^{\top}B$ is invertible $\Rightarrow \lambda = (B^{\top}B)^{-1}B^{\top}x$.

• $\pi_U(\mathbf{x}) = \mathbf{B}(\mathbf{B}^{\top}\mathbf{B})^{-1}\mathbf{B}^{\top}\mathbf{x} \Rightarrow \text{Projection matrix } \mathbf{P}_{\pi} = \mathbf{B}(\mathbf{B}^{\top}\mathbf{B})^{-1}\mathbf{B}^{\top}.$

Why $oldsymbol{B}^{ op}oldsymbol{B}$ is invertible?

ight] \left[egin{array}{ccc} 6 \ 0 \ 0 \end{array}
ight]$$

- First, we find that the spanning set of *U* is a basis (check its linear independence!).
- Derive $\boldsymbol{B} = \begin{bmatrix} 1 & 0 \\ 1 & 1 \\ 1 & 2 \end{bmatrix}$.
- Compute $\mathbf{B}^{\top}\mathbf{B}$ and $\mathbf{B}^{\top}\mathbf{x}$:

$$\mathbf{B}^{\mathsf{T}}\mathbf{B} = \left[\begin{array}{ccc} 1 & 1 & 1 \\ 0 & 1 & 2 \end{array} \right] \left[\begin{array}{ccc} 1 & 0 \\ 1 & 1 \\ 1 & 2 \end{array} \right] = \left[\begin{array}{ccc} 3 & 3 \\ 3 & 5 \end{array} \right],$$

$$\mathbf{B}^{\mathsf{T}}\mathbf{x} = \left[\begin{array}{ccc} 1 & 1 & 1 \\ 0 & 1 & 2 \end{array} \right] \left[\begin{array}{c} 6 \\ 0 \\ 0 \end{array} \right] = \left[\begin{array}{c} 6 \\ 0 \end{array} \right].$$

• Then, solve $\mathbf{B}^{\top} \mathbf{B} \lambda = \mathbf{B}^{\top} \mathbf{x}$ to find λ :

$$\left[\begin{array}{cc} 3 & 3 \\ 5 & 5 \end{array}\right] \left[\begin{array}{c} \lambda_1 \\ \lambda_2 \end{array}\right] = \left[\begin{array}{c} 6 \\ 0 \end{array}\right]$$

So
$$\lambda = \begin{bmatrix} 5 \\ -3 \end{bmatrix}$$
.

• The projection of x:

$$\pi_U(\mathsf{x}) = oldsymbol{B} oldsymbol{\lambda} = \left[egin{array}{c} 5 \ 2 \ -1 \end{array}
ight].$$

• The projection error:

$$\|\mathbf{x} - \pi_U(\mathbf{x})\| = \|[1 \quad -2 \quad 1]^\top\|$$

• The projection error:

$$\|\mathbf{x} - \pi_U(\mathbf{x})\| = \|[1 \quad -2 \quad 1]^\top\| = \sqrt{6}.$$

• Finally, the projection matrix:

$$P_{\pi}$$

• The projection error:

$$\|\mathbf{x} - \pi_U(\mathbf{x})\| = \|[1 \quad -2 \quad 1]^\top\| = \sqrt{6}.$$

Finally, the projection matrix:

$$m{P}_{\pi} = m{B} (m{B}^{ op} m{B})^{-1} m{B}^{ op} = rac{1}{6} \left[egin{array}{cccc} 5 & 2 & -1 \ 2 & 2 & 2 \ -1 & 2 & 5 \end{array}
ight].$$

What if $B = (\mathbf{b}_1, \dots, \mathbf{b}_m)$ is orthonormal?

$$\bullet \ \pi_U(\mathbf{x}) = \mathbf{B}(\mathbf{B}^\top \mathbf{B})^{-1} \mathbf{B}^\top \mathbf{x}$$

What if $B = (\mathbf{b}_1, \dots, \mathbf{b}_m)$ is orthonormal?

•
$$\pi_U(\mathbf{x}) = \mathbf{B}(\mathbf{B}^{\top}\mathbf{B})^{-1}\mathbf{B}^{\top}\mathbf{x} \Rightarrow \pi_U(\mathbf{x}) = \mathbf{B}\mathbf{B}^{\top}\mathbf{x}.$$

• $\therefore \mathbf{B}^{\top}\mathbf{B} = \mathbf{I}.$

• Coordinates: $\lambda = (\mathbf{B}^{\top}\mathbf{B})^{-1}\mathbf{B}^{\top}\mathbf{x} = \mathbf{B}^{\top}\mathbf{x}$.

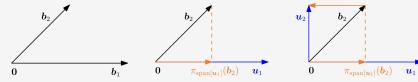

Outline

- ② Gram-Schmidt Orthogonalization
- Rotations

Illustration of Gram-Schmidt Orthogonalization

• **Goal:** Transform any basis $(\mathbf{b}_1, \dots, \mathbf{b}_n)$ of an *n*-dimensional vector space V into an orthogonal/orthonormal basis of V.

$$\mathbf{u}_1 := \mathbf{b}_1
\mathbf{u}_k := \mathbf{b}_k - \pi_{\mathsf{span}(\{\mathbf{u}_1, \dots, \mathbf{u}_{k-1}\})}(\mathbf{b}_k), \quad k = 2, \dots, n.$$

(a) Original non-orthogonal (b) First new basis vector (c) Orthogonal basis vectors \boldsymbol{u}_1 basis vectors $\boldsymbol{b}_1, \boldsymbol{b}_2$. $\boldsymbol{u}_1 = \boldsymbol{b}_1$ and projection of \boldsymbol{b}_2 and $\boldsymbol{u}_2 = \boldsymbol{b}_2 - \pi_{\mathrm{span}[\boldsymbol{u}_1]}(\boldsymbol{b}_2)$. onto the subspace spanned by \boldsymbol{u}_1 .

Example

Example

Consider a basis
$$(\mathbf{b}_1, \mathbf{b}_2)$$
 of \mathbb{R}^2 , where $\mathbf{b}_1 = \left[\begin{array}{c} 2 \\ 0 \end{array} \right]$, $\mathbf{b}_2 = \left[\begin{array}{c} 1 \\ 1 \end{array} \right]$.

Apply the Gram-Schmidt method to construct an orthonormal basis $(\mathbf{u}_1, \mathbf{u}_2)$ of \mathbb{R}^2 (assuming the dot product as the inner product).

$$\mathbf{u}_1 := \mathbf{b}_1 = \left[\begin{array}{c} 2 \\ 0 \end{array} \right],$$

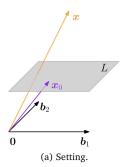

$$\mathbf{u}_2 := \mathbf{b}_2 - \pi_{\mathsf{span}(\mathbf{u}_1)}(\mathbf{b}_2)$$

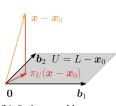

$$\begin{aligned} \mathbf{u}_1 &:= & \mathbf{b}_1 = \begin{bmatrix} 2 \\ 0 \end{bmatrix}, \\ \mathbf{u}_2 &:= & \mathbf{b}_2 - \pi_{\mathsf{span}(\mathbf{u}_1)}(\mathbf{b}_2) = \mathbf{b}_2 - \frac{\mathbf{u}_1 \mathbf{u}_1}{\|\mathbf{u}_1\|^2} \mathbf{b}_2 \\ &= & \begin{bmatrix} 1 \\ 1 \end{bmatrix} - \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix} \end{aligned}$$

$$\begin{aligned} \mathbf{u}_1 &:= & \mathbf{b}_1 = \begin{bmatrix} 2 \\ 0 \end{bmatrix}, \\ \mathbf{u}_2 &:= & \mathbf{b}_2 - \pi_{\mathsf{span}(\mathbf{u}_1)}(\mathbf{b}_2) = \mathbf{b}_2 - \frac{\mathbf{u}_1 \mathbf{u}_1}{\|\mathbf{u}_1\|^2} \mathbf{b}_2 \\ &= & \begin{bmatrix} 1 \\ 1 \end{bmatrix} - \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix} = \begin{bmatrix} 0 \\ 1 \end{bmatrix} \end{aligned}$$

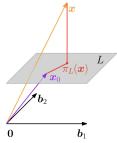

Projection onto Affine Spaces

- Given an affine space $L = \mathbf{x}_0 + U$.
 - U is a low-dimensional subspace of V.
- $\pi_L(\mathbf{x}) = \mathbf{x}_0 + \pi_U(\mathbf{x} \mathbf{x}_0)$

(b) Reduce problem to projection π_U onto vector subspace.

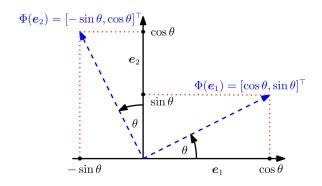

(c) Add support point back in to get affine projection π_L .

Outline

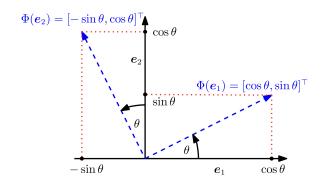

- Orthogonal Projections
- 2 Gram-Schmidt Orthogonalization
- Rotations

Rotataions in \mathbb{R}^2 as An Example

- Standard basis $\mathbf{e} = \{\mathbf{e}_1 = [1 \quad 0]^\top, \quad \mathbf{e}_2 = [0 \quad 1]^\top\}.$
- $\mathbf{R}(\theta) = [\Phi(\mathbf{e}_1) \quad \Phi(\mathbf{e}_2)]$

Rotataions in \mathbb{R}^2 as An Example

- Standard basis $\mathbf{e} = \{\mathbf{e}_1 = [1 \quad 0]^\top, \quad \mathbf{e}_2 = [0 \quad 1]^\top\}.$
- $\mathbf{R}(\theta) = [\Phi(\mathbf{e}_1) \quad \Phi(\mathbf{e}_2)] = \begin{bmatrix} \cos \theta & -\sin \theta \\ \sin \theta & \cos \theta \end{bmatrix}$.
